Find Out More About 610SP Sprayable Coatings Remover
610SP Sprayable Coatings Remover (Formerly SOY•Gel™ Spray)

When an HVLP or Commercial Sprayer is needed for larger jobs, specially formulated 610SP is the ideal product. With the same great clinging power and removal properties of 600GL, working lots of square footage quickly is a snap! BLUE BEAR® 610SP is formulated to flow through industrial airless or HVLP sprayers for large area projects. Easily applied to vertical or horizontal surfaces, 610SP effectively removes multiple layers of topical sealers, acrylics, enamels, urethanes, latex, some epoxies, other single component coatings, and lead based paint*. 610SP is a safe, low odor, non-caustic, green coating remover.

*Ideal for lead-based paint removal. The lead becomes encapsulated in the gel, preventing airborne particles and allowing for safe removal. Dispose of in accordance with all existing local, state, and federal ordinances.

Coverage:
Coverage per square foot varies depending on type and age of coating, number of layers and method of application.
Horizontal: Average coverage is 125 sq ft per gallon (max 200 sq ft per gallon)
Vertical: Average coverage is 75 sq ft per gallon

Test Area:
Due to variances in surfaces and conditions, always test in a small, inconspicuous area before using on complete project.

Application:
Apply 610SP thickly with a 3 or 4 stage HVLP (High Volume Low Pressure) sprayer with a 2.5 tip/needle or an industrial airless sprayer with a .519 tip or larger and a pressure setting of 3000 PSI or higher. Applying too thinly will cause 610SP to dry out before removal is complete. Use a scraper to check if the coating is softened down to the surface. If not, wait longer and recheck. When the coating is completely softened, remove with a scraper.

Clean Up:
Use BLUE BEAR 700DG Degreaser or water and a scrub brush, mop, or power washer to clean remaining thin residue. Remove excess coating(s) and 610SP before using a power washer for final cleaning. Allow surface to dry before further preparations.

Usage Tips from the Pros:
- Mask off areas you do not wish 610SP to get on.
- Not for use on PVC, plastic, rubber, or drywall.
- For veneer finishes, exposure should be in short intervals of 5 to 10 minutes.

Biodegradable: Meets or exceeds ASTM standards

Precautions: Concrete surfaces may darken with use of 610SP. Protect plants and vegetation with a plastic drop cloth. Always use care to prevent overspray from getting on surfaces other than the one being prepped or cleaned.

Warnings: May cause skin irritation. May cause eye irritation. May cause respiratory irritation or may cause drowsiness and dizziness. May be harmful if swallowed. This product contains a chemical known to the state of California to cause birth defects or other reproductive harm. Keep out of reach of children.

Flash Point: Above 200ºF (93.3ºC)

pH Level: 8.1 pH of 1/10 wt/wt solution in soft water

VOC (Volatile Organic Compounds): 49%, 4.249 lb/g, 509 g/l
California and OTC Compliant

Ingredients: N-Methyl Pyrrolidone, Dibasic Ester LVP, Soy Ester, Proprietary Thickening and Surfactant Blend

Safe for Use On: Concrete, masonry, wood, and metal

Do Not Use On: PVC, drywall, limestone, plastic, veneer, terrazzo tile, or rubber
